

Khulna University of Engineering & Technology, Khulna

Department of
Electronics & Communication Engineering

Proposed Project:
University Management Database System Design

Course No: CSE-3210
Course Title: Database Systems Laboratory

Proposed To

Md. Badiuzzaman Shuvo
Lecturer
Dept. of CSE, KUET

Nawaz Talukder Sanglap
Lecturer
Dept. of ECE, KUET

Proposed By

Md Sajib Rahman
1909028
3rd Year 2nd Semester
Dept. of ECE
2021-2022 Session

Introduction:

In the ever-evolving landscape of educational institutions, effective management of data plays a pivotal role in ensuring seamless operations and providing valuable insights for decision-making. The proposed database project aims to address this need by designing a comprehensive relational database tailored for a fictitious educational institution. This database encompasses critical entities such as departments, students, instructors, courses, and their interrelations, establishing a robust foundation for information storage, retrieval, and analysis. By employing industry-standard practices and leveraging the power of SQL, this database will not only streamline administrative tasks but also facilitate informed academic planning, student tracking, and resource allocation. This project marks a significant stride towards enhancing the efficiency and effectiveness of educational institutions in today's dynamic learning environment.

Project Features:

Here are the key features of the database from a user-end perspective:

1. User-Friendly Interface: The database will have an intuitive and easy-to-use interface for seamless interaction.
2. Department Management: Users can add, view, edit, and delete departments, including details like department name and head of department.
3. Student Records: Users can manage student information, including first name, last name, and contact number. They can also assign students to specific departments.
4. Instructor Records: Users can add, view, edit, and delete instructor details, including first name, last name, contact number, and salary. Instructors can also be associated with departments.

5. Course Management: Users have the ability to create, modify, and remove courses, providing details like title, department, and credit hours.
6. Enrollment and Grades: Users can manage student enrollments in courses, including semester, year, and grades.
7. Advisory Assignments: Users can assign instructors to advise specific students.
8. Teaching Assignments: Instructors are linked to the courses they teach, along with the respective semester and year.
9. Referential Integrity: The system enforces relationships between tables, ensuring data consistency and accuracy.
10. Data Validation: The database validates input data to maintain data quality and integrity.
11. Contact Information Accessibility: Users can access contact numbers for students and instructors when needed.
12. Salary Records: Users with appropriate privileges can view and manage instructor salaries.
13. Search and Filter Options: The system provides search and filter functionality for efficient data retrieval.

These features are tailored to provide a user-friendly interface for managing an educational institution's administrative functions.
